## RSV

Respiratory syncytial virus, or RSV, is a common respiratory virus that usually causes mild, cold-like symptoms. Most people recover in a week or two, but RSV can be serious, especially for infants and older adults. In fact, RSV is the most common cause of bronchiolitis and pneumonia in children younger than one year of age in the United States. It is also a significant cause of respiratory illness in older adults.

### Symptoms of RSV

- Runny Nose
- Decrease in appetite
- Coughing
- Sneezing
- Fever
- Wheezing

### Treatment of RSV

- Manage fever with medication
- Drink plenty of fluids
- If your child is dehydrated or having trouble breathing contact your healthcare provider
