The Dangers of Secondhand Smoke

Secondhand smoke comes from lit cigarettes/cigars, electronic cigarettes or from smoke exhaled by smokers

When children breathe secondhand smoke, it is like they are smoking, too

Secondhand smoke harms everyone, especially children:

- An estimated 88 million nonsmoking Americans, including 54% of children aged 3–11 years, are exposed to secondhand smoke
- Tobacco smoke is particularly harmful to children because their lungs and bodies are still developing

Babies and children who breathe secondhand smoke are more likely to become ill with bronchitis, pneumonia and ear infections:

- For children with Asthma, breathing secondhand smoke can trigger an Asthma attack

Take simple steps to protect your children from secondhand smoke:

- Ask others not to smoke around your children
- Support family and friends who want to stop smoking
- Consider a smoke-free home and car
- Teach your children to stay away from secondhand smoke

Consider making the decision to quit smoking. Seek help from your doctor, family and friends. Call this free number for assistance: **1-800-QUIT-NOW (1-800-784-8669)**
